## Duluth Trading Mini Solar Kit

August 1, 2011

There are a variety of solar charging kits on the market, but not all of them can help you keep your cool. This Mini Solar Kit from [Duluth Trading Co.](#) has several attachments that can keep you cool and do several other things, too.

First is the solar collector/battery power station ([storage capacity](#) not documented).

Charge up the power station with 10-12 hours in the sun, then you'll be able to use any of the five attachments: LED flashlight (up to 17 hours from a full charge), FM radio with speaker (up to 6 hours), reading light (up to 17 hours), USB charging device (up to 2 hours), and a hand-held fan (up to 1.5 hours). Everything fits into a mesh storage bag. The [Mini Solar Kit](#) is \$49.50 at Duluth Trading online.
